Subject Index to Volume 11

Ab initio calculations, basis sets for transition metals in, 518
Ab initio calculations, counter poise correction in, 576
Ab initio calculations, diffuse functions on, 930
Ab initio calculations, dissociation in, 629
Ab initio calculations, evaluation of two-electron integrals, 972
Ab initio calculations, for obtaining molecular mechanics parameters, 952
Ab initio calculations, frozen-core approximation in, 1147
Ab initio calculations, frozen molecular fragment method, 1072
Ab initio calculations, frozen molecular fragment method, 1076
Ab initio calculations, local-spin-density method, 924
Ab initio calculations, of alkalie/alkaline earth ion potentials for molecular mechanics, 819
Ab initio calculations, of apically oxygenated phosphoranes, 249
Ab initio calculations, of atomic charges from electrostatic potentials, 297
Ab initio calculations, of atomic charges from electrostatic potentials, 361
Ab initio calculations, of electron distributions, 1101
Ab initio calculations, of GeH_4 electronic spectrum, 1017
Ab initio calculations, of harmonic force fields, 623
Ab initio calculations, of molecules in strong electric fields, 548
Ab initio calculations, of nuclear magnetic shieldings, 32
Ab initio calculations, on amide adenine dinucleotide, 791
Ab initio calculations, on anomeric effect, 765
Ab initio calculations, on diazonium ions, 663
Ab initio calculations, on dimethyl magnesium and dimethyl zinc, 1029
Ab initio calculations, on dipeptides, 654
Ab initio calculations, on imidazole hydration, 1038
Ab initio calculations, on *N*-acetylalanylglycine amide, 573
Ab initio calculations, on palladium with olefinis systems, 754
Ab initio calculations, on phospholipids, 1181
Ab initio calculations, on the active center of Cu, Zn superoxide dismutase, 346
Ab initio calculations, on third-row atoms, 1206
Ab initio calculations, on vinylcyclobutane rearrangement, 896
Ab initio calculations, on water, carbon dioxide complexes, 1
Ab initio calculations, substituent effects on addition of HF to fluoroethylenes, 170
Ab initio calculations, using higher-symmetry point groups, 636
Ab initio calculations, utilizing data compression for first-order convergent iterative procedures, 45
Ab initio calculations, validity of polarization and correlation additivity in, 311
Acceptance, ratio method, for hydration calculations, 76
Acidities, by semiempirical calculations, 1009
Adsorption, of hydrocarbons on graphite, 291
Alkenes, molecular mechanics calculations on, 848
Anomeric effect, *ab initio* calculations, 765
Antimony, diatomic, *ab initio* calculations on, 924
Artificial intelligence, for conformational analysis, 680
Artificial intelligence, in NMR assignment of protein structure, 805
Atomic charges, from electrostatic potentials, 297
Atomic charges, from electrostatic potentials, 361
Atomic charges, from semiempirical calculations, 431

Bicyclic 222 cryptand, dynamics, 19
Bond-order bond length relationship, 1160

Character tables, computer generation of, 589
Chromatography, of enamations, using molecular mechanics, 181
Chromatograpy, of enantiomers, using molecular mechanics, 242
Cocaine diasterfomers molecular mechanics and semiempirical calculations on, 1111
Conformational analysis, by artificial intelligence, 680
Conjugated hydrocarbons, molecular mechanics calculations on, 868
Counterpoise correction, indirect, 576
Critical properties of substances, calculation of, 493
Crown ethers, molecular mechanics calculations on, 837

Diazonium ions, *ab initio* calculations on, 663
Dibenzo-*p*-dioxins, 112
Diels-Alder reactions, molecular mechanics calculations on, 351
Diffuse functions, in *ab initio* calculations, 930
Diffusion, kinetic model of, 194
Dihydrofolate reductase inhibitors, semiempirical calculations on, 644
Dissociation, in *ab initio* calculations, 629
Distance matrices, polynomials of, 829

Eigenvalue algorithm, Davidson's, 1164
Electron correlation, additivity in *ab initio* calculations, 311
Electron distributions, calculation of, 1101
Electrostatic calculations, boundary element method for, 1080
Electrostatic calculations, on imidazole hydration, 1038
Electrostatic charges, by multiple constraint, 978
Electrostatic potentials, by semi-empirical calculations, 909
Electrostatic potentials, calculation of, 401
Electrostatic potentials, for molecular similarity calculations, 1139
Electrostatic potentials, from *ab initio* calculations, 297
Electrostatic potentials, from *ab initio* calculations, 361
Electrostatic potentials, from AM1, 159
Electrostatic potentials, from multipole expansions, 112
Electrostatic potentials, from semiempirical wavefunctions, 416
Electrostatic potentials, of biomolecules, 603

Fluoroethylenes, *ab initio* calculations on addition of HF to, 170
Force fields, by *ab initio* calculations, 623
Free energy perturbation calculations, on active sites, 994
Free energy perturbation method, for hydration calculations, 76
Frozen-core approximation, in *ab initio* calculations, 1147

Graph theory, distance polynomials, 829
Graph theory, evaluation of the characteristic polynomial, 217
Graph theory, expanded Wiener numbers, 899
Graph theory, of polyhex hydrocarbons, 223

Hardness, atomic and local, 694
Heats of formation, by semiempirical calculations, 1009
Heteroarotinoids, calculations on, 531
Hydration free energy, 76
Hydrocarbon acidities, from semiempirical calculations, 94
Hydrocarbons, molecular mechanics force field for, 1125
Hydrogen bonds, molecular mechanics calculations on, 1217
Hydrolysis of acids, by semiempirical calculations, 1094
Hydrolysis, of *N*-methylcarbamates, by semiempirical, calculations, 524

Integrals, calculation on parallel computers, 1147
Integrals, two-electron, evaluation of, 972

Kinetics, of coupled reactions, 382

Linear algebraic equations, new algorithm for solving, 545
Liquids, ethers, Monte Carlo calculations on, 958

Macro-model program, for molecular mechanics calculations, 440
Metallo-enzymes, force fields for, 346
Molecular dynamics calculations, of superoxide hydration, 1003
Molecular dynamics calculations, on peptides, 468
Molecular dynamics calculations, on peptides, 487
Molecular dynamics calculations, on polymers, 236
Molecular dynamics, combined quantum mechanical and molecular mechanical potential, 700
Molecular dynamics high temperature annealing, 19
Molecular dynamics, for free energy perturbations, 994
Molecular dynamics methods, for searching energy surfaces, 1021
Molecular dynamics, of urea, 560
Molecular dynamics, on proteins in water, 1169
Molecular dynamics, parameterization, using *ab initio* calculations, 952
Molecular dynamics, program for, 943
Molecular mechanics, from *ab initio* calculations, 654
Molecular mechanics, of alkaline and alkalie earth metal ions, 819
Molecular mechanics calculations, force field for saturated hydrocarbons, 1125
Molecular mechanics calculations, of enantiomeric separations, 181
Molecular mechanics calculations, on alkenes, 848
Molecular mechanics calculations, on alkyl iodides, 734
Molecular mechanics calculations, on chromatographic separations of enantiomers, 181
Molecular mechanics calculations, on chromatographic separations of enantiomers, 242
Molecular mechanics calculations, on cocaine, 1111
Molecular mechanics calculations, on cocaine diasterformers, 1111
Molecular mechanics calculations, on conjugated hydrocarbons, 868
Molecular mechanics calculations, on crown ethers, 837
Molecular mechanics calculations, on Diels-Alder reactions, 351
Molecular mechanics calculations, on disaccharides, 205
Molecular mechanics calculations, on heteroarotinoids, 531
Molecular mechanics, on hydrogen bonds, 1217
Molecular mechanics, on lanthanide complexes, 1061
Molecular mechanics calculations, on metal complexes, 326
Molecular mechanics calculations, on methylene cyclohexane, 411
Molecular mechanics calculations, on myelin basic protein, 1087
Molecular mechanics calculations, on phospholipids, 1181
Molecular mechanics calculations, torsional potentials in, 1234
Molecular mechanics calculations, with macroModel program, 440
Molecular similarity calculations, 1139
Molecular surfaces, calculation of, 1047
Monte Carlo calculations, for searching energy surfaces, 1021
Monte Carlo calculations, for searching energy surfaces, 1021
Monte Carlo calculations, on aqueous solutions, 374
Monte Carlo calculations, on equation of state of solid, 511
Monte Carlo calculations, on liquid alkyl ethers, 958
Monte Carlo methods, for searching energy surfaces, 1193
Multipole expansion for electrostatic potentials, 112

N-acetylal anylglycine amide, solvent effect and entrophy calculations on, 573
Nicotinamide adenine dinucleotide (NADH), calculations on, 791
Nuclear magnetic shieldings, *ab initio* calculations of, 32
Newton-Raphson algorithm, adjusted, for energy surfaces, 58

Oligosaccharides, molecular mechanics calculations on, 205
One-electron integrals, 105
Optical properties, nonlinear, of molecules, 82
Optimization, of large molecules and clusters, 67
Out-of-plane bending, first and second derivative matrix elements for, 336

Palladium, *ab initio* calculations on interactions with small molecules, 754
Parallel processing, for protein-ligand calculations, 314
Peptides, atomic charges in, 978
Peptides, electrostatic potentials of, 603
Peptides, molecular dynamics calculations on, 468
Peptides, molecular dynamics calculations on, 487
Phospholipids, molecular mechanics and *ab initio* calculations on, 1181
Phosphorus compounds, *ab initio* calculations on, 249
Polymers, matrix description of, 396
Polymers, molecular dynamics calculations on, 236
Potential energy surfaces, finding local minima on, 58
Protein-ligand binding, by parallel processing, 314
Proteins, expert system for structure by NMR, 805
Proteins, molecular dynamics in water, 1169
Proteins, structure prediction of, 121
Proton affinities, of substituted phenolate ions, by semiempirical calculations, 269
Pseudopotential calculations, 1029

QSAR, hypolipidemic activity of phthalimides, 569
Quantitative structure-property relationships, 493

Rate constants, for capture rates from molecular collisions, 88
Reactions, coupled, kinetic equations for, 194

Reactions, coupled, kinetics of, 382
Rotational barriers, for substituted ethones, 748
Rotational diffusion in molecules, 64

Semiempirical calculations, AM1 electrostatic potentials, 159
Semiempirical calculations, combined with molecular dynamics, 700
Semiempirical calculations, comments on AM1 vs. PM3, 541
Semiempirical calculations, comments on AM1 vs. PM3, 543
Semiempirical calculations, for acidities and heats of formation, 1009
Semi-empirical calculations, for electrostatic potentials, 909
Semiempirical calculations, of adsorption of hydrocarbons on graphite, 291
Semiempirical calculations, of atomic charges, 431
Semiempirical calculations, of electrostatic potentials, 416
Semiempirical calculations, of hydrocarbon acidities, 94
Semiempirical calculations, of nonlinear optical properties, 82
Semiempirical calculations, of proton affinities of substituted phenolates, 269
Semiempirical calculations, on amide adenine dinucleotide, 791
Semiempirical calculations, on cocaine diastereomers, 1111
Semiempirical calculations, on cyclization of alkyl halide anions, 1119
Semiempirical calculations, on heteroarotinoids, 531
Semiempirical calculations, on maleamic acid hydrolysis, 1094
Semiempirical calculations, on phthalimides, 569
Semiempirical calculations, on the hydrolysis of *N*-methylcarbamates, 524
Semiempirical calculations, on triazine antifolates, 644
Structures, superposition of, 1187
Superoxide hydration, molecular calculations on, 1003
Superposition, of chemical structures, 1187

Thermodynamics of solids, via Monte Carlo calculations, 511
Trajectory calculations, 88
Transition metal complexes, molecular mechanics calculations on, 326
Transition metals, basis sets for, 518

Urea, molecular dynamics of, 560

Vinylcyclobutane rearrangement, *ab initio* calculations on, 896

Water, *ab initio* calculations on dimer, CO_2 complex, 1
Water solutions, Monte Carlo calculations on, 374
Wiener numbers, 899
Wreath product groups, 589
